

ANIL JAISWAR

B.Sc. IT graduate specializing in Full-Stack Development, DevOps Automation, and Cloud Infrastructure. Hands-on experience building and deploying production-grade applications using Python, Flask, Docker, Kubernetes, Terraform, and AWS. Strong exposure to CI/CD, GitOps, DevSecOps, and observability tools. Seeking an entry-level DevOps / Cloud / Software Engineering role to apply automation and cloud-native skills in real-world environments.

Project

ITSM Ticket Management System(DevSecOps Platform)

► **GitHub:** <https://github.com/jaiswaranil8387/itsm-ticket-management>

► **Technology Stack:**

Backend: Python, Flask, PostgreSQL

Frontend: HTML, CSS, JavaScript, Bootstrap, Jinja2

DevOps & Cloud: Docker, Kubernetes, Terraform, Ansible, ArgoCD, AWS EC2, Nginx Ingress

CI/CD & DevSecOps: GitHub Actions, Trivy, Bandit, Semgrep, Pip-audit, Gitleaks, Flake8

Observability: Prometheus, Grafana, EFK Stack (Elasticsearch, Fluent Bit, Kibana), Jaeger

► **Description:**

Developed a full-stack, web-based **IT Service Management (ITSM)** application to simulate real-world helpdesk workflows, including incident tracking, authentication, and ticket resolution.

Implemented core features such as ticket creation, editing, search, priority/status management, **role-based access control (Admin/Read-Only)**, and operational dashboards using Chart.js.

Core Skills

Programming Languages:
Python, JavaScript, SQL, Bash, HTML, CSS

Frameworks & Libraries: Flask, Jinja2, Bootstrap, Chart.js, Werkzeug, OpenTelemetry, Gunicorn

Databases: PostgreSQL

DevOps & Cloud Platforms:
Docker, Kubernetes, Terraform, Ansible, ArgoCD, AWS (EC2, VPC, IAM, S3), GitOps, CI/CD, Cloud-Native Architecture

DevSecOps Security Tooling:
Bandit, Semgrep, Pip-audit, Gitleaks, Trivy, Flake8

Monitoring, Logging & Tracing:
Prometheus, Grafana, Elasticsearch, Fluent Bit, Kibana, Jaeger

Developer Tools & Platforms: Git, GitHub, Linux, VS Code

Soft Skills

Problem-Solving, Fast Learner, Effective Communication, Team Collaboration, Time Management, Customer-Centric Approach,

Languages

English

Hindi

Marathi

Hobbies

Designed and implemented a **production-grade DevOps pipeline** with end-to-end automation:

- ▶ **Infrastructure as Code:** Provisioned AWS EC2 resources using Terraform to support a Kubernetes cluster.
- ▶ **Configuration Management:** Automated Kubernetes node bootstrapping using Ansible playbooks.
- ▶ **Standardization:** Engineered a custom **Dockerized Deployment Runner** to eliminate 'it works on my machine' issues, ensuring consistent tooling versions (Terraform/Ansible) across environments.
- ▶ **GitOps & CI/CD:** Enabled continuous delivery using **ArgoCD** and **GitHub Actions**, **reducing build times by ~40%** via **Automated Semantic Versioning** for immutable release tagging, pip caching and multi-stage Docker builds.
- ▶ **Secure Networking & Access:** Implemented **Cloudflare Tunnel** to securely expose the private Kubernetes application to the public DNS (aniljaiswar.pp.ua), ensuring Zero-Trust access without opening inbound firewall ports or exposing public IPs.
- ▶ **Security (Shift-Left):** Integrated SAST with Bandit/Semgrep, SCA with Pip-audit, secret scanning with Gitleaks, container scanning with Trivy, and linting with Flake8 to enforce security and code quality early in the pipeline. **Hardened container runtime security** by enforcing **no-new-privileges** contexts to prevent privilege escalation attacks.
- ▶ **Observability:** Implemented centralized monitoring, logging, and distributed tracing using **Prometheus, Grafana, EFK Stack, and Jaeger**, enabling **automated log-trace correlation** to reduce Root Cause Analysis (RCA) time.

Achieved **fully automated deployment from code commit to production**, demonstrating hands-on experience with modern **DevOps, Cloud-Native, and DevSecOps practices**.

Linux Skills

- ▶ Linux Administration & System Management
- ▶ Linux Installation and Configuration
- ▶ User & Group Management
- ▶ Password Aging Policies & Root Password Recovery
- ▶ Linux Booting and Shutdown Process
- ▶ File System Hierarchy (FHS)
- ▶ File & Directory Permission Management (chmod, chown, chgrp)
- ▶ Hard Links & Soft Links Management
- ▶ Passwordless Authentication (SSH Key-Based Access)
- ▶ SSH Configuration & Troubleshooting
- ▶ Cron Jobs & Task Scheduling
- ▶ Shell Scripting (Bash)
- ▶ Package & Repository Management
- ▶ Process Monitoring & System Performance Management
- ▶ Linux Networking Fundamentals
- ▶ Log Monitoring & Troubleshooting
- ▶ Linux Commands and File Operations

AWS Skills

- ▶ Amazon EC2 (Instance Provisioning & Management)
- ▶ AWS Identity and Access Management (IAM)

- ▶ Music
- ▶ Cricket
- ▶ Reading

- ▶ Amazon S3 Object Storage
- ▶ Amazon EBS Volumes, Snapshots & AMIs
- ▶ Amazon CloudWatch Monitoring
- ▶ Amazon SNS Notifications
- ▶ Elastic Load Balancer (ELB)
- ▶ Auto Scaling Groups (ASG)
- ▶ Amazon Route 53 DNS Management
- ▶ AWS CloudFront (Content Delivery Network)
- ▶ AWS Lambda (Serverless Computing)
- ▶ Amazon DynamoDB
- ▶ Single Sign-On (SSO) Authentication
- ▶ AWS Security Best Practices
- ▶ Backup & Disaster Recovery
- ▶ Serverless Architecture
- ▶ Cloud Infrastructure Management
